

Management System

Integrated Management System Quality, Health & Safety

Cleshar places great emphasis on the quality, health and safety aspects of all works undertaken. The company has appointed an HSQE Director and has a department dedicated to these aspects of operations. This team works closely with the project and operations teams to ensure that all works are carried out in accordance with legislative and client specific requirements.

The company has developed an Integrated Management System (IMS) to meet the requirements of the various management standards for health & safety, quality and environment. This integrated approach is mirrored in the suite of documents raised to manage the contracts.

Each project is accompanied by three main documents all of which address quality, health and safety and environmental issues, these documents are identified by the following:

- Project Plan
- Method Statement
- Emergency Plan

Accreditation

“The OHSAS management system is established and effective.”

BSI surveillance report - OHSAS 18001

“The organisation of the construction and engineering activities is well controlled.”

BSI surveillance report - ISO 9001

Integrated Management System

Cleshar has established a system for the collation and analysis of data as part of the overall Management Review which is undertaken on an annual basis. This includes measuring our performance against HSE recognised categories for accidents and incidents so that trends may be identified and year on year comparisons made on safety performance.

At Cleshar we believe that every individual is responsible for their own health and safety and the safety of those around them. We are committed to ensuring that every possible preventative measure is put in place prior to the commencement of any project in order to reduce the risk of any eventualities.

The overall Management Review is used as the basis for the setting of strategic targets for improvement that are based upon the details collated and analysed from the various specific reports. This includes the setting of targets that constantly strive to improve statistics on:

- Accidents
- Incidents
- Site audits
- Client audits
- Customer complaints/NCR's

We utilise an IMS as the basis of the management of all works. The system is based upon 4 main processes:

- Managing the system
- Managing the contract
- Managing the works
- Managing Head Office

Within each of these main processes are procedures covering a range of activities relevant to the management standard.
